

## ***Sustainability Mission Statement***

At R1i Technology we are committed to driving positive change through technology while prioritising sustainability at every step of our journey. Our mission is to harness the power of innovation to create a more sustainable and equitable future for all.

We believe in the responsible development and deployment of technology solutions that not only enhance the lives of our customers but also minimise our environmental footprint. To achieve this, we are dedicated to the following principles:

**Environmental Stewardship:** We are dedicated to reducing our carbon emissions, conserving resources, and minimising waste in our operations. Our goal is to operate as a carbon-neutral company, actively promoting clean and sustainable practices throughout our value chain.

**Ethical Sourcing:** We commit to sourcing materials and components ethically, favouring suppliers who share our commitment to sustainability, fair labour practices, and responsible resource management.

**Innovation for Sustainability:** We strive to develop and promote products and services that help address pressing environmental and social challenges. Our focus is on creating technology solutions that empower individuals, organisations, and communities to make sustainable choices.

**Inclusivity and Diversity:** We foster a workplace culture that values diversity and inclusivity, as we recognise that a broad range of perspectives is essential for solving complex sustainability challenges.

**Community Engagement:** We actively engage with our local and global communities, supporting initiatives that promote environmental conservation, education, and social well-being.

**Transparency and Accountability:** We maintain transparency in our sustainability practices, reporting our progress regularly and holding ourselves accountable for our commitments.

**Continuous Improvement:** We continually assess and improve our sustainability efforts, seeking innovative ways to reduce our environmental impact and enhance our positive social contributions.

By aligning our technology-driven mission with these sustainability principles, we aim to inspire and lead the tech industry in its transition to a more sustainable future. Together, we can create a world where technology and sustainability go hand in hand, enabling a better quality of life for all, today and for generations to come.
